Tenants currently residing in rent stabilized apartments (as distinguished from those searching for new apartments) receive the greatest level of protection under the existing system. The creators of rent stabilization were particularly concerned with community and household stability and sought to avoid the displacement of “long-time” residents. While existing tenants face guideline adjustments upon renewal of their leases, new tenants are charged vacancy increases (in accordance with the statutory formula). This approach has, however, resulted in widely “skewed” rents for comparable apartments. Notably, the RGB staff has found that “longevity discounts” exist in unregulated housing as well as in New York’s regulated market.98 Whether regulated or not, landlords favor long-term steady rent payers. The critical difference is that rent regulated tenants tend to stay in their units about twice as long (about nine years on average) as their unregulated neighbors. Thus, the longevity discounts accumulate over a longer period.
